## ABOUT ME

---

I believe History, Culture, and Context along with the engineering principles and elements are the 3 primary factors that shape reasonable physical environments. With ongoing social, environmental and economic challenges around the globe, we need creative minds to meet the needs of our people without compromising the ability of future generations to meet theirs. My educational and professional background that combines the practice and sciences, have given me an understanding of the technical and social aspects of engineering, and I am looking to re-imagine engineering through my knowledge and the power of my imagination.
